

Moving Your Projects from the GitHub Classroom to your Account

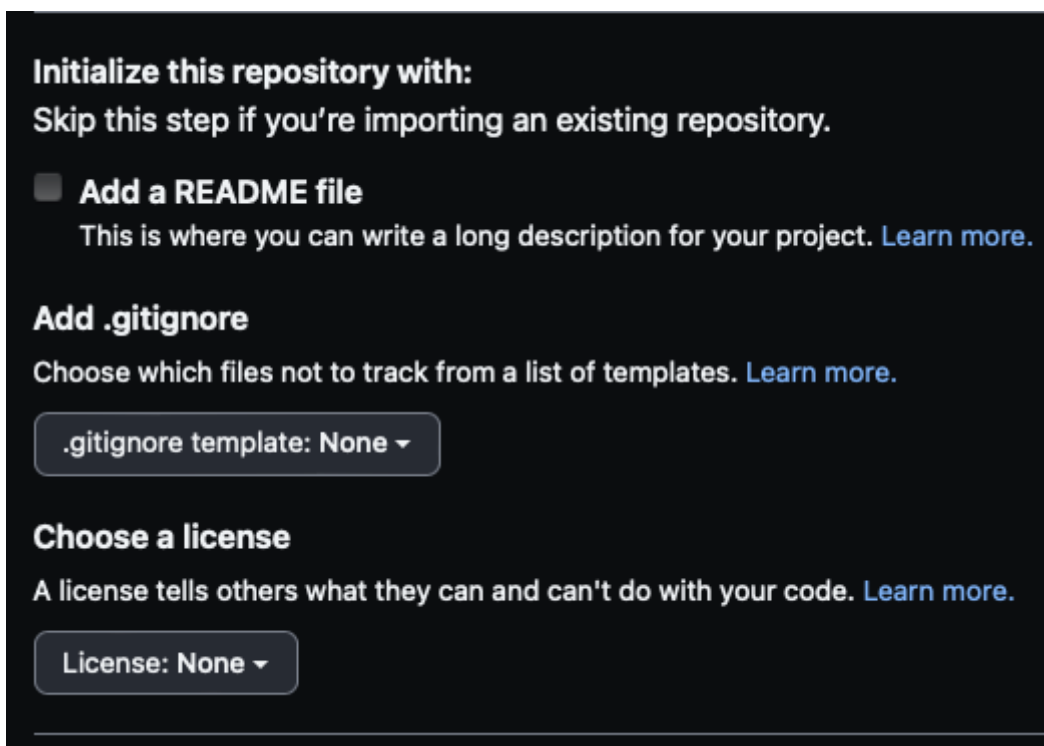

Step 1: Make a new repo to move your old project into

- ☐ Make a new repository on GitHub for the project you want to move by clicking the [New](#) button on the homepage.

 Keep that repository tab open, because you'll need to reference it later.

▲ Notice how the instructions say to skip this if you are importing an existing repo, which you are. So skip this stuff and leave it blank.

Step 2 : Move your old project into that repo

- ☐ Open your terminal
- ☐ Navigate using `cd` to your class project directory (not your new repo)
- ☐ Run the following commands in order:  (You need that stub from step 1)

- ☐ `git remote remove origin`

- ☐ `git remote add origin https://github.com/YOUR-USERNAME/YOUR-NEW-REPO-NAME`

- ☐ `git branch -M main`

- ☐ `git push -u origin main`
